Rec^d Jan 29.

Wilkes-Barre Jan. 24 1877

Dear Doctor

Yours of Jan 7. was only received to day I reply at once. It is as you say. The Prince on the mountain top becomes rough when smaller than that below, — and I think you have no stature, instead of merely assuming the change to age. My head has not been troubling me so much of late. I dont know what the cause is — but have had it since I was a boy. & it has been the cause of my leaving civilization & going west so much. In the Manuscript In Your Volume Book, let Watson Vol V Kings Report be the guide. Only dont describe anything he has described or that is in Gray Manual. I describe everything else briefly. Except the California things which I simply keep apart for an appendix at the end of the other part of the work. And will only Catalogue them. Please put the collection ~~total~~ number in parenthesis at end of description

in all the plants within Sonora Colorado - Arizona New Mexico or wherever they come from. Next summer I mean you shall have full collections of what oaks I come across - about here - and if I can do anything before, please let me know

Yours Truly

Ans 9

Dear Doctor

The way is this. I recognize the ~~Colorado~~ collections all except those from California as representing a continuous area. And hence describe everything except such as Watson in Bot. Q. and Kings Survey and Gray in manual describe. This makes the bulk of the volume. I describe it even if it is described in Botany of California. for many Army surgeons in Arizona, etc will use it who have no access to Fl. Cal.

2nd I describe nothing in my 1878 California Coll. for this the Fl. Cal. does. I make a separate list (simply a list) giving place of collection altitude and page in Fl. Cal. if it be in the volume now out. This is to be an appending to main report. Merely a list of what I obtained in California

I cant say how about C. rindiflora from Nevada as I saw nothing of that coll. but have had to describe in faith. and from material in my own herbarium from other sources. Enclosed I send few specimens of 933. Mosquito pap. It appears to compare well with 560 Hall & Harbour from same region. Keep the specimen. I have another. I will try & get ripe fruit of

West Chester Chester Co Penna
Jan. 2nd 1878

My dear Dr. Engelmann

Happy new year to you and many more of them with comfort in all.

I forward you to day the remaining proof. Please give it your earliest attention and return as usual to Lt. G. M. Wheeler U.S. Engr. Lock Box 93 Washington. D.C. I have the rest of your mina contribution in 2nd revise but as the alterations you indicate are all attended to it is hardly worth while to bother you with them. My reason for keeping Fontacaa after Conjugata is I find it so in Hooker's Synopsis of orders at end of the English edition of Le Maout & Decaisne, which is understood to predominate the order in the remainder of Flora Planterarum. And I have endeavored to conform to it throughout so far as I could.

Fearing that they have not done as I requested about sending you the paper on the Conjugata from Washington I take the liberty of sending you

along with this your MS. Long ago asked urgently of Dr Wheeler to send you copies of all my contributions to Botanica for your own use. If he has not done so I will shoulder the responsibility of letting this MS go. but if he has, please return it to me. As Wheeler with an absurdity of red tape insist on holding me responsible for return to him of all the original MSS, even though I had taken the trouble to copy all to guard against accident.

With a renewed expression of profound obligation to you My dear Dr. I am as ever

Yours truly

Rec'd Jan 24th
Ans — Saturday

Phila. Box 2838, Jan. 21, 1878.

My dear Doctor,

By the way, before I forget I want to say that if you place any dependence on double stained cross sections of pine leaves for the compound microscope and are not in the way of making them yourself, I will after awhile be glad to do so for you. I am devoting all the very little spare time I have now to that line of work for class room lectures. I have not yet laid my hand on the Coniferae but know perfectly well that I can succeed with it. Now to go back. You say in yours received this morning. "I adhere to your last order to describe all that are not in Gray's Manual — is it so?" Now in yours of Oct 9, the last in which we had any discussion as to plan; You say: "Here come more orders again. Heretofore you have said Gray's Manual, Watson's Botany, Fl. Cal., everything else to be described. Now you exclude Fl. Cal." Well I should not my dear Doctor have alluded to this except to give you a better idea of my consistency. The plan is this — The plants of

1871 & '72, ~~described~~ enumerated by Mr. Watson in Wheeler's pamphlet of 1874, from page 5 to page 19, inclusive and the plants of 1873, enumerated by me in the same paper, page 31 to 57 inclusive and the collection of 1874, as yet mostly unpublished, are to be arranged according to their orders in one report and all of them described except such as are described in Watson's Botany of the 40th parallel and in Gray's Manual. The plants of 1875 collected by me in California are not to be described as this will be done in Gray and Watson's Flora of Cal. I keep them separate and simply enumerate them and will make an appendix of them for the back part of the volume. The plants of 1871 & 2, I have never seen; they are in Cambridge. Trusting to the accuracy of Mr. Watson's determinations I have described the species from other specimens. Erythraea triacantha is evidently a misprint. The other two are of course good species. When known always give the number and place of collection and usually name the collector.

Yours ever,

J. T. Rothrock

Philad. Dec 28 38. Jan 29. 1898

Dear Dr. Engelman

Yrs. received and I like it much. Many thanks. Yes are right. All the plants of 1897 S. are from California and are to be simply enumerated, not described and are to be bound as a separate paper as an appendix in the back of the volume. Of course when I have the same species (in the collection) coming from some other place as well as from California, it is to be described in the body of the book (in which case it is simply named) as usual. described in Gray Manual or Watsons Bot. W. U. and is also to be enumerated in the Cal. list. I have not now on hand any pine bog section, but will make some as early as possible, i.e. when the press of work allows me.

Yours truly

Nov. 13th 1878

My Dear Dr. Engelmann

Your letter this morning is a pleasing assurance that you are out of bed and about again. I have requested that the Cactae be sent you.

As to want of Uniformity. It is of course better that in essential details a work should be uniform, but I think we often go too far in details. In my introduction I state that the general model being given each author's work will appear as nearly as may be in his own style. I knew that the editor is expected to put MSS. in shape, but I did not want to take any responsibility of the kind lest I should, fail to give the exact idea and so lay myself open to a severer charge. In fact some of those who contribute would "go for me" if I did. The signs ' & " I know are objectionable but I was ordered to follow the model of W.V. Kings Rep & hence had no choice.

As for locality I simply put a dash

West-Chester Chester Co Penna Dec. 10th 1878

My Dear Dr. Engelmann

You can trust my copy of your mss for figures, I am sure. Don't you remember that the first-proof sent you from here you complained that nothing was sent you save that in which the printer's corrections were to be found? Well, now that red-tape copy that you returned was the clean copy sent at my request in order that you might have the whole margin to make notes in. If you did not use it of course I don't know why the printer wanted it back but so he did. I will hurry along that extra copy of the original for you. For of course I can understand that you would want to compare it with your present work.

Now let me rise to a point of order — I did not do justice to the Epheda!!.. You say. Well. Well. No man knows that better than I do; but then my dear doctor. has it not been the burden of my song for three years that I had <u>positive orders</u> not to describe Anything described in Vol. I Kings Survey or in Gray Manual? Now I utter my protest against being in anyway held responsible for such sins of omission. I know there are many cases in which I should have said more, but I was positively bound not to.

Now all I ask is fairness and that I be without any mental reservation exonerated from blame in this matter. Am I not right? I have in no case insisted on others following me in the matter for I wanted them to have the best show possible, but I was under orders. I have you see so many sins of my own to answer for that I cant possibly carry those which dont belong to me.— Still we are nearing the end and I am glad of it. for the work has been done by me when I was sick. And under a load of care and anxiety that ground all the life out of me. Once I get to Z in the index I shall break out into Luthers long meter doxology. and then think about some botanical work I can take up and do in a more thorough manner as I want to do it. I will send you the revise soon as it comes.

Yours

My Dear Dr Engelmann

To day you advance sheets from Fl. Cal. Vol II reached me. Many thanks for them. You surely have made through work of them there. I am glad to see Quercus Sonomensis given place to L. Kellogg's.

I have a special favor to ask of you. It is this. Can you spare me another copy of your "Synopsis of the Cactaceae of the Territory of the United States & adjacent regions". You kindly gave me one copy which was my companion in 1874 through Arizona but one unfortunate day a pack saddle wipe cut it nearly half into when it was I supposed safely stowed away in my bundle. I have almost all else of yours save the paper on Wilkinsonia Pl. & I want to have a lot of binding done

one of these days.

You ask what the outlook is. Well if you mean my prospects I can only guess about as bad as they can be. The University promises actually nothing so far as I can see now or in the future. I have to take all sorts of half-pay small jobs that leave not an hour for botanical study, hence I am doing no scientific work that is of any value.

I do not want my dear Dr. to do superficial work, such as I have done. But I have never been able to help myself. I will send you in a few days half a dozen microscopic slides double-stained. Not that they have any value but simply to remind you that I am still alive. I regret exceedingly that I missed you when in Philad.

Yours Ever

J. T. Rothrock

My Dear Dr Engelmann

I send you by to day mail 6. of my double stained vegetable preparations. I find the staining process of great use especially in teaching. I dont suppose you will see much in them you have not seen in the unstained. I am possibly that the ostiata in the Pinus Monophyllus are more clear. Please look at them with a power of say 100 diameters.

Yours Very
J. T. Rothrock

I am looking after Johns Hopkins University. Can you give me a lift in any way there?

MISSOURI BOTANICAL GARDEN
GEORGE ENGELMANN PAPERS

West Chester Penna. Nov. 19th 1879

My Dear Dr.

Your letter was received yesterday. I am glad you find those slides of interest. Thinking you might like a sciadopitys stained and mounted I have prepared for me for permanent specimen. There are 4 sections on it. The two in the middle have been bleached in Labarraque solution. Since the starch & chlorophyll proto plasm etc is all gone. They are stained in Logwood. & as you will observe the central bundles are as plainly differentiated as in the Pinus* I sent you. The two sections at the end of the row are not bleached, except by soaking in Alcohol. I must not wonder if you found some starch grains from the potato in which I held the leaf to section it; still adhering. In them there is the same differentiation only the colors are two, Carmine and Iodine green. For a detailed account of my method of doing this see Botanical Gazette for September. I ~~will say~~ will say here lest I forget it that I am to have the good luck of 6–8 months in a German laboratory next year. I had just a little prospect from Johns Hopkins, but cant

say what will come of it? Thanks my dear Dr. for the use of your potent name. I will use it if called upon.

What surprises me about the Sciadopitys is the entire absence of stomata save in the yellow sulcus on the lower side of the leaf. Here too it requires a fair power and good manipulation to show them well. In P monophyllus, if I remember correctly they are in lines all around the leaf. Sciad. is very instructive. I have now got a bright pupil making cross sections & staining them of all the authentically determined pines in my herbarium again. Also preparing cuticle in same way: to make a thesis of it for coming examination. He is much pressed for time however. I have no doubt you can after spring get the use of his slides if you desire, or may be get a duplicate set of them.

Later. Mr. 23rd concerning Vitis. The specimen named vulpina was from Florida. Hence the vulpina of Linnæus. Now in it the bark does not shell off and the small liber bundle first-developed remain at the tip of the cone then come the later ones in plates. The thickened sides of the cone ~~[illegible]~~ made up of either wood or liber (I don't think they can always be distinguished) bind the plates together. Hence the bark holds on. and gives always the small apex of the cone. Now in the other specimen the truncated plates are due to the removal of the outer bark having carried away the small apex. I think on that same specimen you will find some of the bark either remaining entirely or partly but in either case showing the enclosed plates.

Yours Truly

J. T. Rothrock

I have succeeded in putting 3 colors in what I take to be a section of Vitis Labrusca. I send also a single stained specimen of Cuscuta, prepared by another process, it is of no great value save as a curiosity.

My dear Dr. Engelmann

I have to ask as a very special favor that if you can spare me, you will send a copy of your paper on Pines to Mr. Crozer Griffith. 2038 Chesnut St. Philadelphia Penna. He is a bright young student of mine who for some months has been studying the pine leaves microscopically with great care: making stained sections of them. If there be any cost let me know & I'll remit. but I am very anxious that he should have a copy.

Yours Truly J. P. Wickersham

Dear Dr Engelmann.

The paper on Ferns which you were kind enough to send me I received yesterday. I had just been thinking of writing to ask you for it.

I suppose I am mistaken in the University of Penna. permanently, but my time all goes of necessity to Medical Botany. In fact I have been driven to begin preparation of a book of the sort for my students in the course preparatory to Medicine. I suppose all these changes which have come in my field of work mean that I am to do no original work but simply be a teacher. I have come to accept the situation with a sort of enforced complacency.

With many thanks for your very important paper I am sincerely Yours

J. T. Rothrock

Dear Dr Engelmann

I received your kind note a few days ago. Touching the matter of Second growth Oak being stronger: the fact is now so generally allowed that Wheels made of it command higher prices than those made of first; I have verified my conjecture published in that paper relative to the strength of the medullary rays. Thus live Oak pulls a-part in the direction of the rays at about 1100 lbs to the square inch, but in Father at right angles to it at about half that weight. These facts will soon be more fully brought out by a pupil of mine. & as he has not yet published I had rather nothing was said about it yet. Touching the Vitis. I will be very glad to prepare specimens for you if you name and send me the material. The dry sticks do not stain so well as the green but I think

I can bring them out ~ ~~I think~~. Please send them very soon as in a little while I shall be away for several months. If you prefer I will give the sections a study and report results to you, though your judgment in them I think is worth more than mine.

Concerning length of fibre. I have not been able to make clearly out yet that it has any certain relation to strength, except in such extreme cases as Phoradendron where owing to the very short fibre the twig snaps almost like glass. I am now sure that we must admit differences in the quality of the cellulose per se, as affecting strength of timber. Hopes is busy with a big contract of Landscape Gardening. I want to study the microscopic character of wood very much more ~ and will do so; but when? I am so overworked by my University duties. Teaching 30 hours a week, & riding sixty miles a day (to & from my home) does not encourage original investigation.

Yours faithfully
J. T. Rothrock

My Dear Dr Engelmann,

I am much pratified to hear of your safe return to this Country. I have been unable to use my eyes until very recently & hence have been unable to prepare your specimens. I shall finish the lot in a few days. Hearing of you at Boston I did not know where to send them — pray let me know — My eyes are I fear about used up.

Yrs Truly
